

KNEER-SÜDFENSTER

Windows For Healthy Living

The most important subsistence for the human being is the air we breathe. Particularly in the most important place on earth, our home, the air should be free from pollutants

Since we spent most of the time about 90 percent of the day in closed spaces, discharge from building materials and furnishing can endanger our health. Today the strain on indoor air is ten times that of outdoors.

WINDOWS SO CLOSE TO NATURE

- The exceptional durability of our windows and entrance doors has to be the biggest contribution we are making to the conservation of our resources. A large proportion of the wood used has its origins in so-called sustainably cultivated forests
- Wood profiles are coated exclusively with environmentally friendly colour systems
- Our pvc windows are stabilised using calcium-zinc formulation and display the “Green Line” trademark, i.e. which means they are environmentally friendly quality windows
- Our pvc windows are anti-bacterial, hygienic, antiseptic and particularly suited to people suffering from allergies or asthma
- The high level of heat insulation of our windows reduces energy consumption
- The cycle of the glass has been technically reconciled and it technically advanced
- All metal and rubber parts used can be recycled

Kneer-Südfenster products are service-friendly, easy to maintain and colourfast.

Healthy living windows offer ...

... optimal room climate

- Pollutant-free indoor air
- Toxin-free
- Verifiably low in emissions
- Without volatile organic solvents
- allergy-friendly
- Harmless to health
- odourless products

... longevity

- Innovative surface technology
- minimal maintenance

... sustainability

- renewable raw materials
- recyclable materials
- Protection for future generations
